

Integrative Medicine of Lake Mary, Inc.

Dynamic, Inspirational and Passionate are words used to describe Mr. Curtis Bennett , World Leader in Thermographic Imaging.

Mr. Curtis Bennett CEO of Thermografix Consulting Corp. www.thermoguy.com is to be commended for his care and concern of planet earth and its declining viability. He views the earth as an organism having a poisoned circulatory system, a limited detox capability and a system that works best when kept in ecological and electromagnetic balance. He is equally alarmed about the health crisis of earth's population but especially the world we are leaving to the unborn. His passion is to bring attention to the plight of the unborn fetus and the origin of toxins adding to their body burden before they are even born.

His research , experience and wisdom allows him to connect issues such as **global warming, environmental toxicity** and how these create and intensify global warming in the human body causing chronic inflammation which can be visualized by thermography. His technical expertise exposes invisible threats to our external and internal environment.

Although his expertise has been in electrical engineering and heat energy transfer in the construction and industrial arena he has made '**quantum leaps**' in helping medical professionals and giving them sight to see suspicious lesions and abnormal heating and energy patterns.

He uses great teaching and research skills to show similarities between **hydroelectromagnetic principals** in industrial engineering and the importance of good hydroelectromagnetic balance in the human engineering model.

As a Family Medicine Physician, I was pleased by the **medical application of Thermography** with my patients. Each patient evaluated during the imaging process was motivated to drink electron rich water and to invest in magnetic insoles to reinvigorate their nerves and circulatory systems which are dependent on these natural solutions for optimal physiology.

Thank you Curtis for enriching the lives of our patients in the Central Florida community.

Ronald Lynch, MD
